WARNING:

- Improper installation of this product can result in personal injury. Always wear safety goggles when cutting, drilling and assembling the product.
- Incorrect installation may cause harm to the product or individual.

NOTICE:

- DO NOT attempt to assemble the kit if parts are missing or damaged.
- DO NOT return the product to the store, for assistance or replacement parts call: 1-877-265-2220.

- 1.** Measure the height of your opening. The post and aluminum support will need to be $\frac{1}{2}$ " shorter than the opening to allow for the mounting plates.
- 2.** Cut column to size cutting through the column and aluminum support tube. Always double check your length requirements before cutting.
- 3.** Position plates onto column.
- 4.** Position, square, and level the columns. Mark the column plate locations at the top and bottom. Twist column 45° on the mounting plates to expose the screw holes. Make sure plates are in marked locations and attach plates using enclosed tap-con screws at the base and #12 x $1\frac{1}{2}$ " screws at the top. After secure, twist column back to the original position.
- 5.** For high wind conditions, #8 x $1\frac{1}{4}$ " screws may be used to firmly attach the columns to the mounting plates by screwing through the lock tabs on the plate and covering with optional skirts.
